SUMMARY

Experienced Software Developer specializing in Portals – Office365 and SharePoint. Skilled in developing web and mobile applications using various Microsoft tools (Power Platform) and creating custom SharePoint web parts using frontend languages such as CSS, JavaScript, TypeScript, and React. Former participant and organizer of the Microsoft "App in a Day" event.

EXPERIENCE

Software Developer

Devscope

March 2022 – January 2026 , Porto – Portugal

- Development of web and mobile applications using various Microsoft tools, including Power Apps, Power Automate, SharePoint, and Dataverse.
- Development of custom SharePoint web parts using various frontend languages, including CSS, JavaScript, TypeScript, and React.
- Trainer for Microsoft's "App in a Day" workshop.

Internship Trainee

Internship

- Designed and developed a low-code solution to assist companies with candidate tracking and selection.
- Architected comprehensive software solutions leveraging Microsoft's ecosystem which improved data accessibility for HR teams; feedback sessions revealed this initiative addressed three major pain points affecting recruitment efficiency.

Software Developer Specialist

Devscope

January 2025 – Present, Porto – Portugal

- Build applications using low-code tools (Microsoft Power Platform).
- Process Automation through the Microsoft tool, Power Automate.
- Create custom Sharepoint pages with SPFX (Sharepoint framework).
- Power Shell scripting to automate internal integration processes between systems.
- Speaker "App in a Day" event by Microsoft

PROJECTS

Digital transformation of the service order process

Devscope

- Digital transformation of manual and time-consuming service request processes across multiple departments.
- Use of Microsoft tools, Power Platform for process transformation.
- Use the integration of the Sharepoint tool with the Power Apps tool to centralize data and create various applications based on data stored in Sharepoint and external data.
- Use of Power Automate to automate manual processes into digital processes that run within apps to minimize order fulfillment time in various departments.

Application to score partner companies in financial sector

Devscope

- Creation of several stand-alone applications with different classification methodologies depending on the department and the form used.
- Integration between SharePoint and Palantir to aggregate data saved by apps.
- Use of Sharepoint to save data saved by apps.
- Use of the Power Apps tool to create applications (forms) that were sent to departments to classify the various partner companies in the financial sector.
- Automation within the applications and calculations made to the scores given by the users, was carried out using Power Automate.

Process automation using Jobs – PowerShell scripting

Devscope

- Use of PowerShell to create a number of scripts that automated the Sharepoint integration processes with data from SAP.
- Each of the scripts executed had certain rules and the data was treated in different ways depending on the category of each item.

HR Tracking

Devscope • 03/2022 – 07/2022

- Development of an application to assist DevScope in selecting open job positions within the company, leveraging low-code tools from the Microsoft Power Platform.
